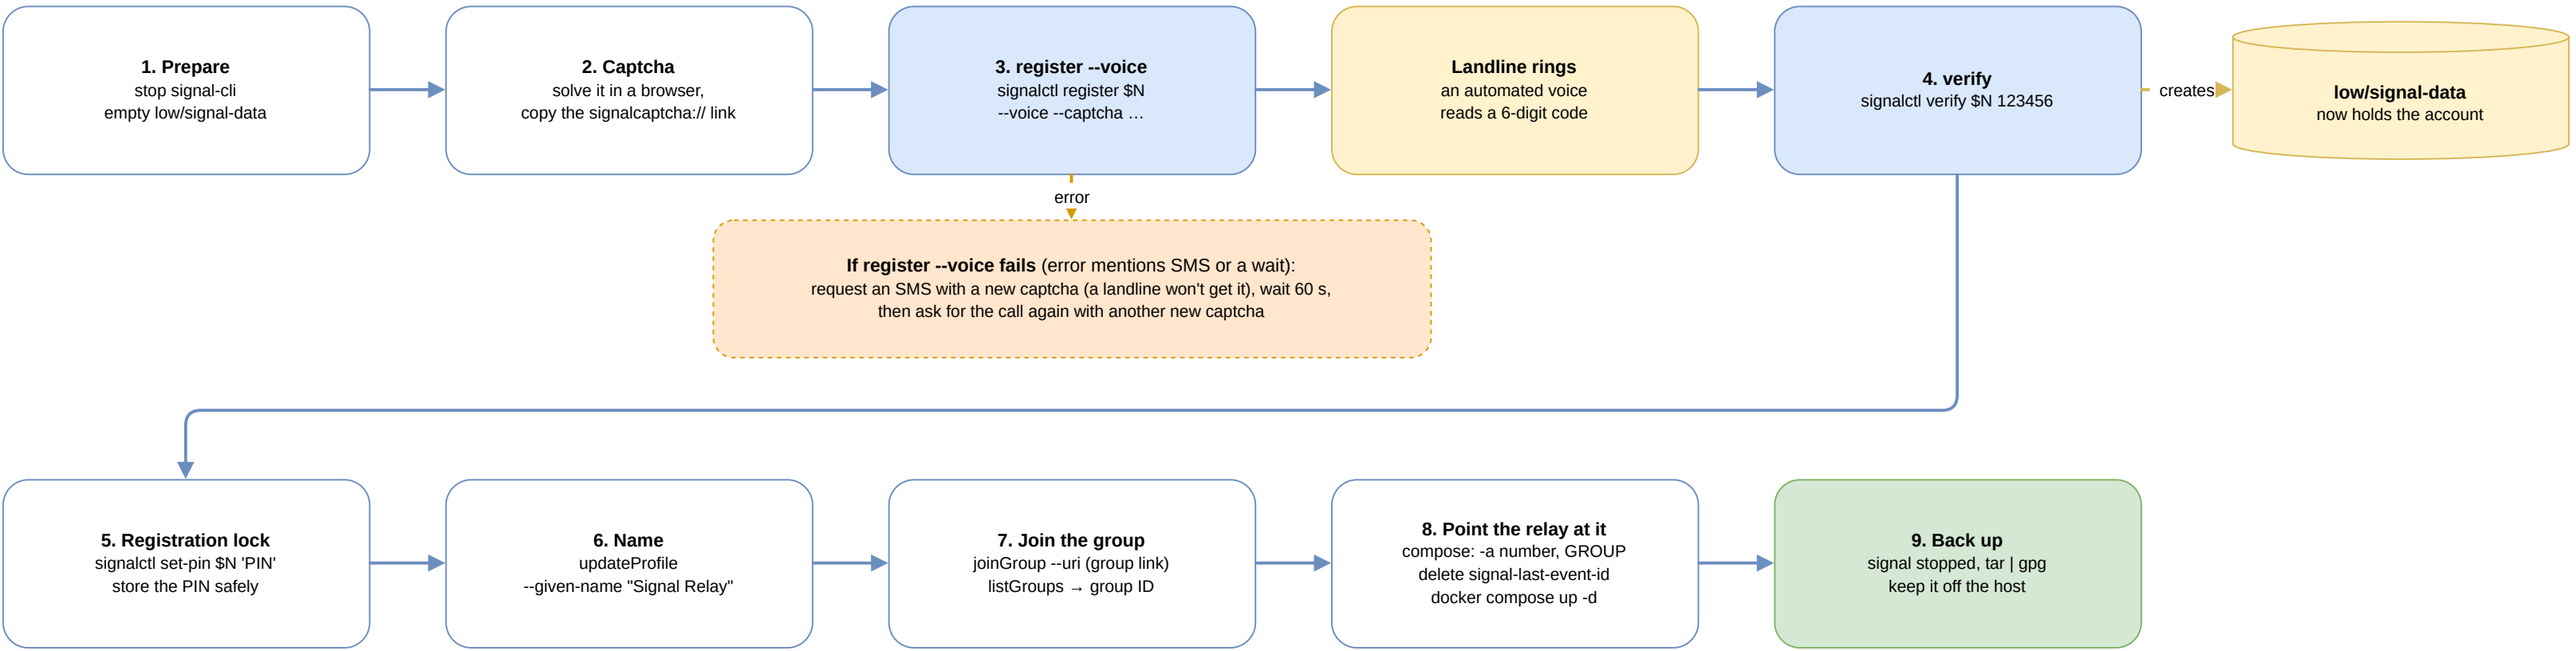
Registering a new number (service account)

docs/register-account.md: signal-cli becomes the number's main device; no phone needed



Rules for a service account

- Never register the number anywhere else: a new registration logs this one out.
- Keep signal-cli running: Signal deletes accounts that stay offline for months.
- Never run two signal-cli on signal-data. Stop the signal service before any signalctl command.
- Later devices (Signal Desktop, a sender) are linked from it with addDevice --uri 'sgnl://…'.
